

## Digital vault for online gaming and betting operators

*Are you an online gaming operator in the French market?*

*.....then you are subject to the online regulations law.*

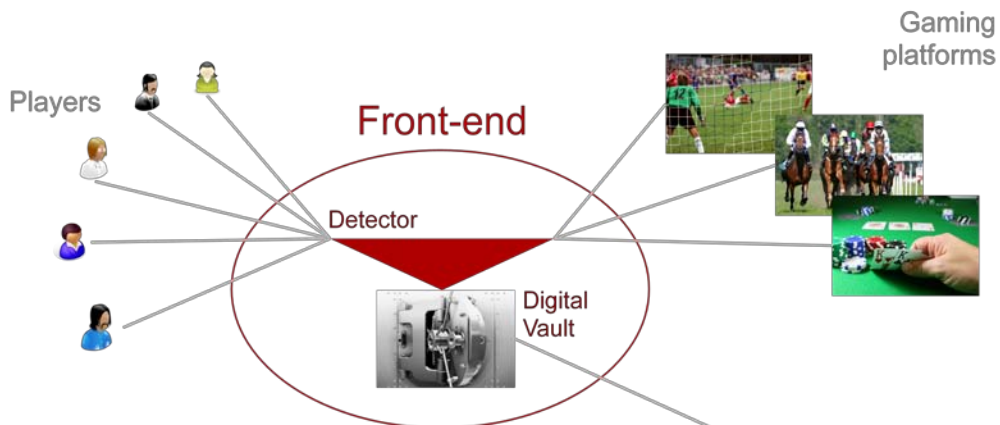

French Law N° 2010-476 of 12 May 2010 regarding the opening to competition and the regulation of the online gambling market.

In order to be authorized to offer online gambling in France, an operator must be accredited by ARJEL (*Autorité de régulation des jeux en ligne* i.e. France's Online Gaming Regulator). ARJEL provides that gambling operators must apply for accreditation by category of game or betting: horse bets, sports bets and multi-round games like poker.

ARJEL's accreditation requires in particular that operators implement a front-end equipped with a certified digital vault (*Coffre-fort*) meeting a very strict specification.

## Security.com's digital vault for online Gaming

Security.com's digital vault for Online Gaming (*Coffre-fort des Jeux en Ligne*) has been operational since ARJEL issued the first accreditations on 8 June 2010.

Security.com offers a comprehensive front-end (called *Frontal*) solution that:

- ✓ complies with the decree of 17 May 2010 and ARJEL's Technical Requirements File;
- ✓ includes digital vault (*Coffre-fort*) software for Online Gaming;
- ✓ includes a customised sensor (*Capteur*).

## A turnkey ARJEL front-end

Cecurity.com has a team of gaming security specialists who can implement a sensor ("Capteur") adapted to the customer's needs.

Cecurity.com provides Online Gaming digital vault ("Coffre-fort des Jeux en Ligne") software that fully satisfies ARJEL's technical requirements. The chosen architecture exceeds these requirements in terms of high availability and redundancy.

Cecurity.com has instigated the First Level Security Certification (CSPN) of ANSSI (Agence nationale de la sécurité des systèmes d'information) (France's National Agency for Information System Security) for its Online Gaming Digital Vault ("Coffre-fort des Jeux en Ligne") software.

## The trustworthy solution for your gaming platform

In choosing the Cecurity.com software solution, an operator can choose, while fully complying with the ARJEL requirements, to implement the solution internally, to outsource it or even to start with an outsourced solution while providing for an insourcing phase at any time.

Cecurity.com offers an approach that is adapted to the needs of its customers, which can include the complete handling of the front-end ("Frontal"): this way the operator concentrates on his core business.

### Choosing Cecurity means:

- ♠ choosing a flexible solution adapted to your business model;
- ♦ choosing high availability and very high performance;
- ♣ choosing a leading publisher in France for legal archiving;
- ♥ choosing the solution of major operators.

## Cecurity.com in a few words...

[Cecurity.com](http://Cecurity.com), listed on the NYSE EURONEXT over-the-counter market, publishes the Communicant digital vault software for legal archiving, personal data protection and traceability.
